

A standard sender unit for connection to a single (52mm) gauge installation. An isolated earth return ensures electrical safety. Manufactured from corrosion resistant materials for durability.

Rudder sensor is usually installed on sternward rudder horn to collect signals by wire resistor. These sensors are made of materials of the highest quality.

Model	Angle Range	Resistance
ROD-5	40° - 0 - 40°	0-190 Ohms

Angle range 40° - 0 - 40°;
Resistance 0 - 190 Ohms;
Type Lever Arm;
Form Ungrounded.
